

Firmware WANDLA 2.0.0: introducing Ferrum Streaming Control Technology.

Converters Reimagined

WANDLA does what no other DAC does. Our new Ferrum Streaming Control Technology lets you control your streamer with your WANDLA remote control and also display title and artist info on its touch screen.

Being the most important part of the WANDLA 2.0.0 firmware update, let's focus on our Ferrum Streaming Control Technology for a minute. Just imagine. You made the decision to upgrade your computer's sound by connecting our WANDLA to its USB port. Your streaming content has never sounded this good and you will probably play more of your favorite music than ever before. Wouldn't it be more convenient for you if you would be able to also put the basic controls and album info in the place where your great sounding music is flowing from? With our latest firmware update WANDLA can do exactly that (and more), and puts your music center stage conveniently at your fingertips!

With our Ferrum Streaming Control Technology (FSCT) you'll be able to control your streaming music right from WANDLA's touch screen and its remote control. A quick look on WANDLA's screen will tell you title and track information and give you the ability to play, pause and skip your beloved songs. While our finely tuned UX makes it a breeze to operate, FSCT puts the control over your music right where it belongs. On WANDLA and its remote control.

**Your music deserves
quality in playback
and control!**

Firmware update WANDLA 2.0.0 explained

The complete list of new features our WANDLA 2.0.0 firmware will present looks as follows:

- **FSCT:** convenient control of your streaming content at your fingertips*.
- **Volume Synchronisation:** control DAC built-in preamp volume from your computer and vice versa.
- **Improved user experience (UX):** focused on presenting relevant information the best way.
- **I²S compatibility:** support for more devices connectable via I²S input.
- **Favorites input:** choose frequently used inputs and select between them easier.

As with all our firmware updates, installation is a breeze using our Ferrum Control App (for PC and Mac). After a couple of minutes your WANDLA will bring you more joy than it ever did before when you take a look at our refreshed display layout. Our updated user experience makes operation of complex functions feel more natural and easy. Together with FSCT we have been able to present information in the best possible way, readable from close up and from afar. The beauty of FSCT is that WANDLA can show information of the artist, title and progress bar from any device running MacOS, Windows or the Volumio OS plugin. So apart from enjoying your headphones with WANDLA HP or powered speakers with WANDLA or WANDLA GoldenSound edition, you could be experiencing these control advantages with your living room stereo setup as well. FSCT works on all WANDLA models, will be introduced during the coming High End Munich and made available publicly shortly after the event. For free.

*At launch Windows, MacOS, and Volumio OS will receive full support, provided that their applications, plugins, and services include all necessary features. Partial support may be available on other platforms, streamers and Operating Systems depending on their implementations. Please consult our website for the latest information.
